

## **Electronic Supplementary Material**

Tracking Pigeons in a Magnetic Anomaly and in Magnetically 'Quiet'  
Terrain.

Ingo Schiffner, Patrick Fuhrmann and Roswitha Wiltschko

Fachbereich Biowissenschaften der J.W.Goethe-Universität Frankfurt,  
Siesmayerstraße 70, D-60054 Frankfurt am Main, Germany

Additional figures and table:

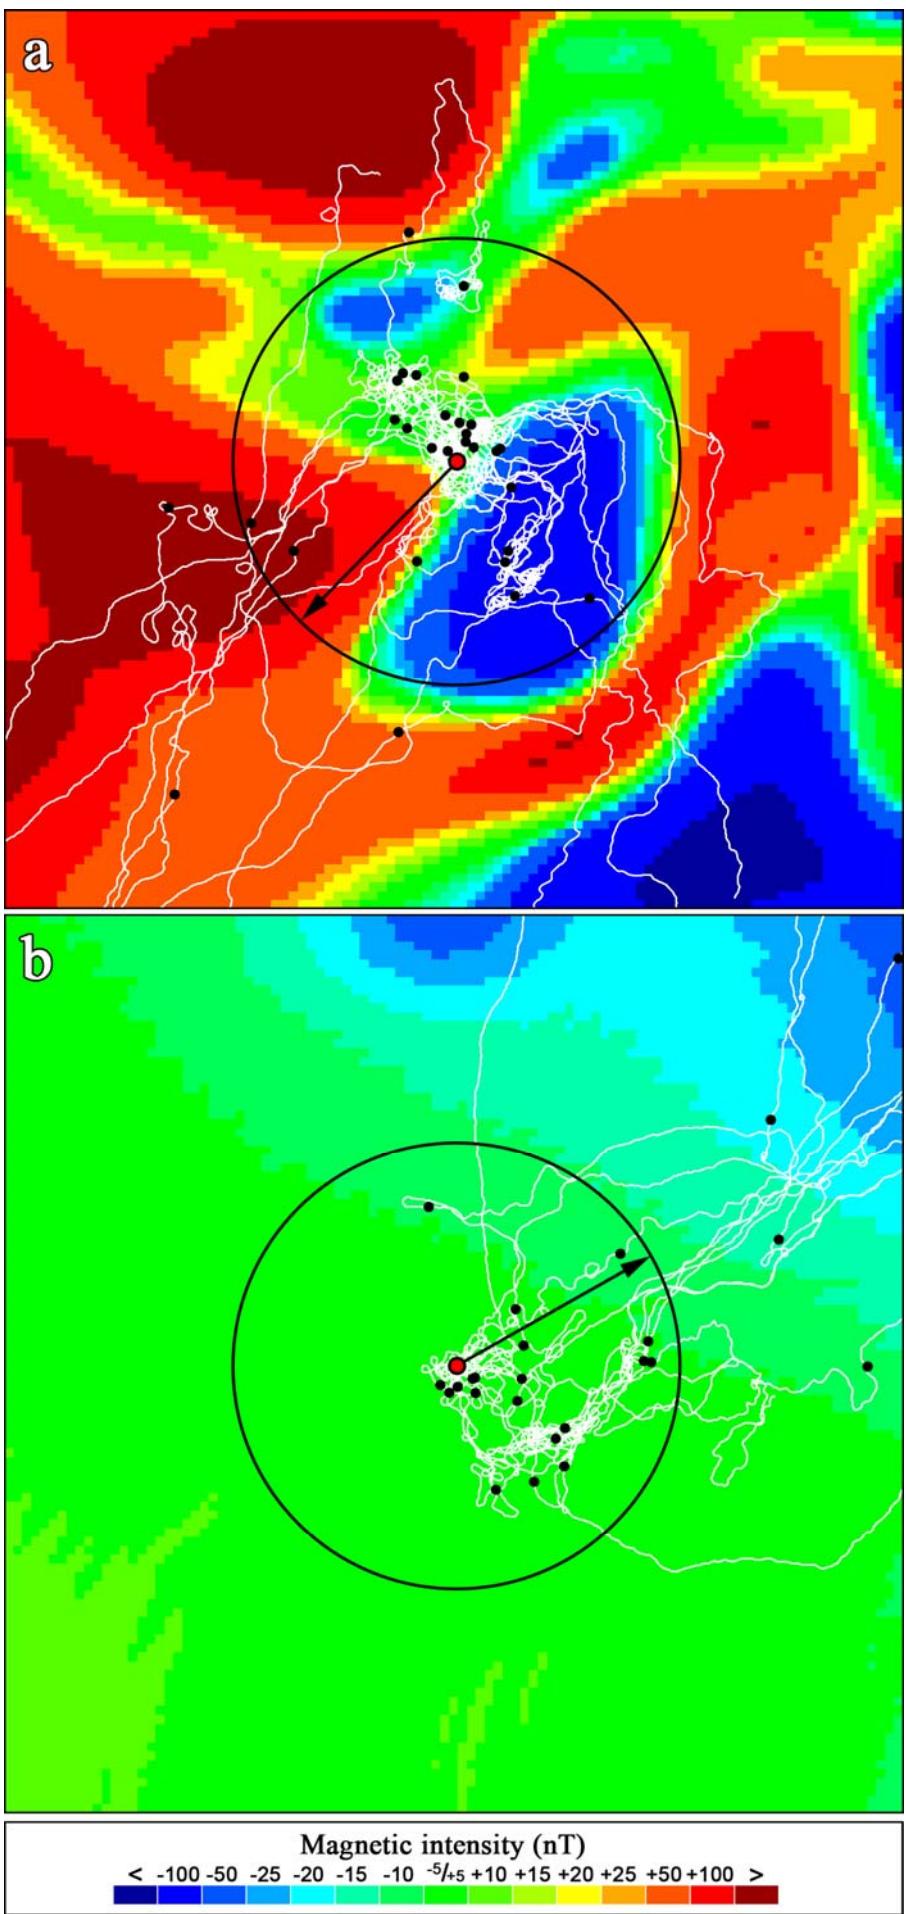

**Fig. S1** Magnetic conditions and tracks within an area of 5 x 5 km around the release sites

**Fig. S2** Topography and tracks within an area of 5 x 5 km around the release sites

**Fig. S3** Altitude profile and tracks within an area of 5 x 5 km around the release sites

**Fig. S4** Differences in intensity encountered by the pigeons along their routes compared  
with those of a random distribution.

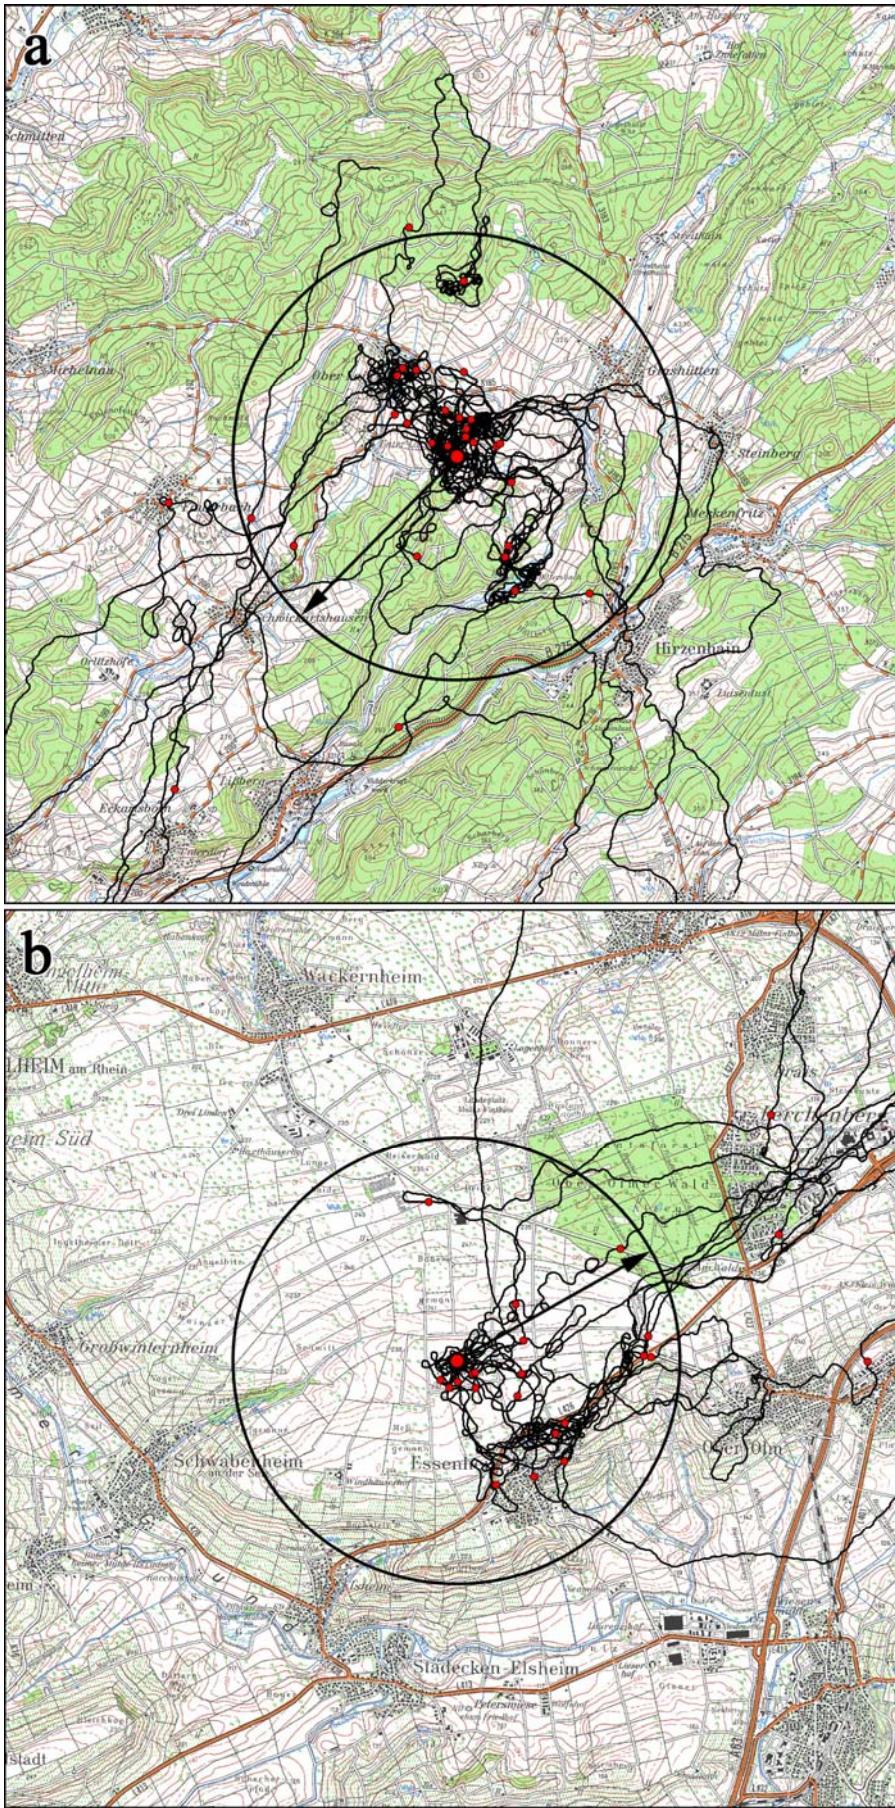

**Table S1** Data of the individual tracks

**Fig. S1**

Magnetic conditions and tracks within an area of 5 x 5 km around the release sites Oberlais within the anomaly (a) and Essenheim within magnetically 'quiet' terrain (b).

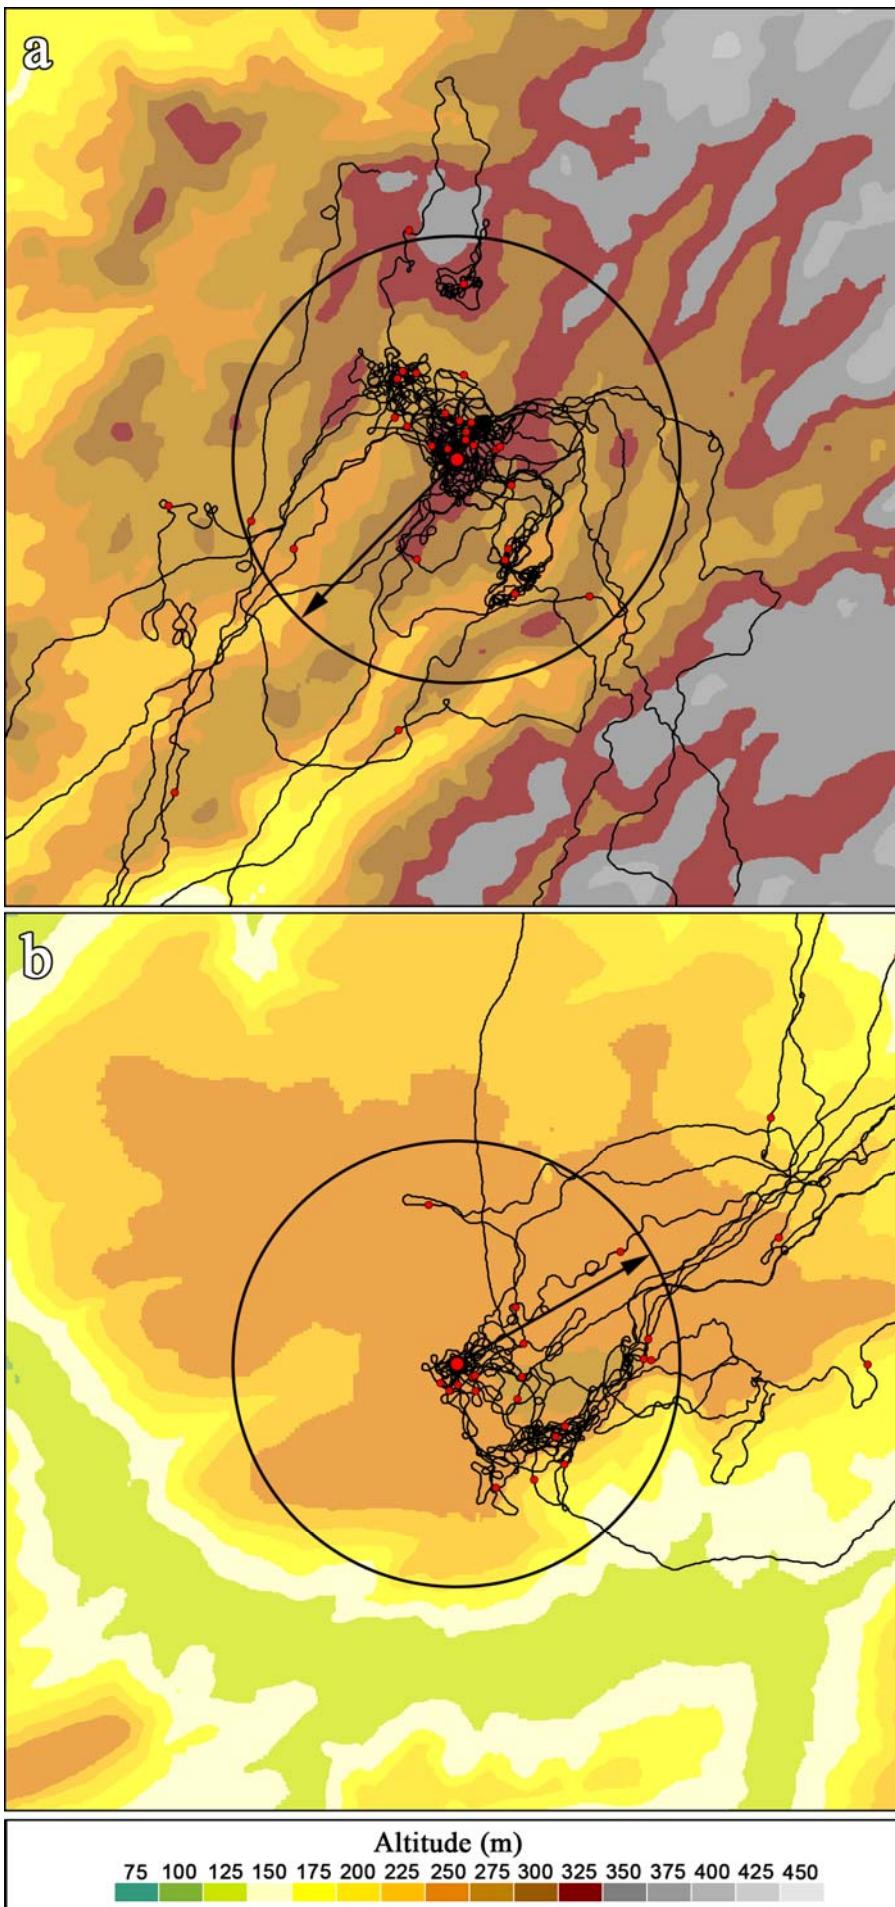

The colours of the map indicate the local differences in intensity (given in 100 x 100 m squares) to that at the release point - note that the scale is non-linear. The release sites in the centre of a circle with the radius 2.5 km are marked by a red dot; the arrow indicates the home direction. The tracks are shown as white lines, with the black dots marking the Points of Decision.

**Fig. S2**

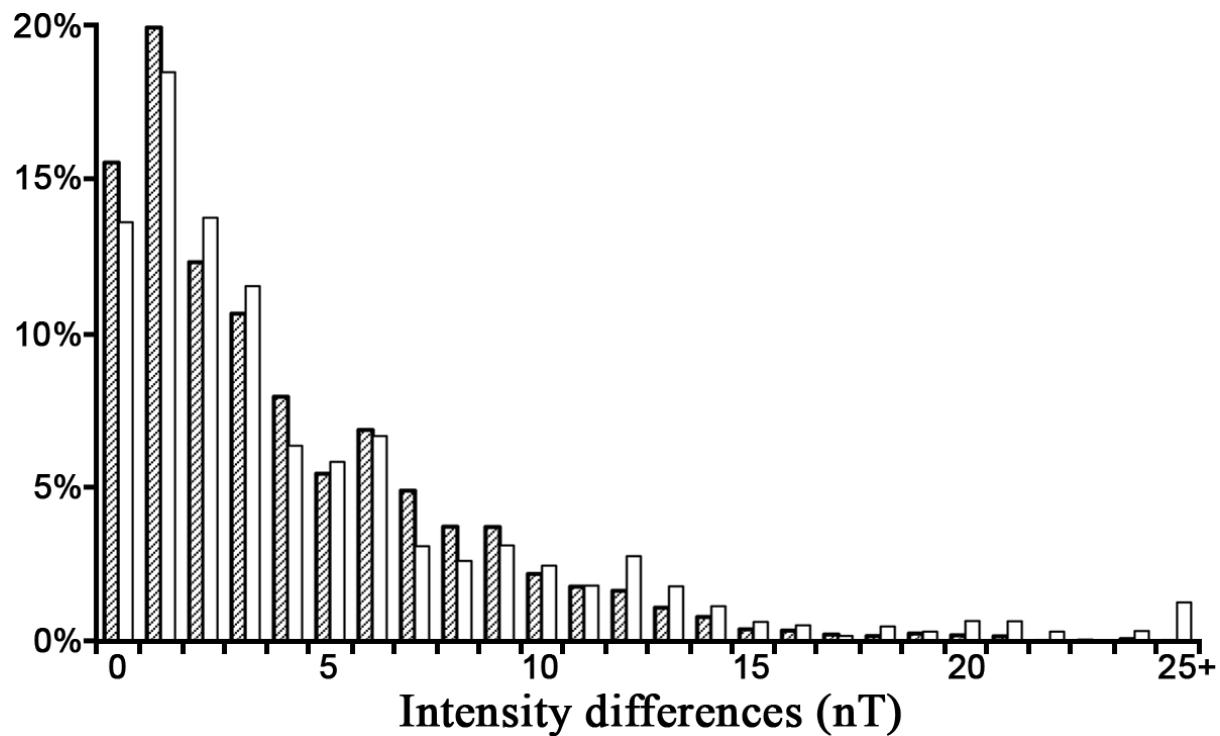

Topography and tracks within an area of  $5 \times 5$  km around the release sites Oberlais within the anomaly (a) and Essenheim within magnetically 'quiet' terrain (b).

The release sites in the centre of a circle with the radius 2.5 km are marked by a red dot; the arrow indicates the home direction. The tracks are shown as black lines, with the smaller red dots marking the Points of Decision.

**Fig. S3**

Altitude profile and tracks within an area of  $5 \times 5$  km around the release sites Oberlais within the anomaly (a) and Essenheim within magnetically 'quiet' terrain (b). The colours of the map indicate the altitude above NN. For the other symbols, see Fig. S2.

**Fig. S4** Distribution of intensity differences encountered by the pigeons along their routes through the anomaly until the 5 km circle (hatched columns) compared to those of a random distribution based on 13 trajectories, one every 15° within the home-semicircle, from the release point to the 5 km circle (open columns).

**Table S1 Data of the individual tracks**

Pigeon	Date	1st Point of Dec.		Dur.	Route	Initial Phase		Depart. Phase	
		Bear.	Dist.			Head.	Stead.	Head.	Stead.
Control site Essenheim in magnetically quiet terrian, 42.2 km, home direction 61°

First Point of Decision: Bear., bearing given as angular deviation from the home direction; Dist., distance from release point in m. Initial Phase: Dur., duration in s; Route, length of route flown in m; Head., heading given as angular deviation from the home direction, Stead, steadiness, defined as vector length of headings; Depart. Phase, departure phase (see main text).
